## Horatio's Garden South West Design Concept

### Design

Cleve West's design brilliantly incorporates the form of the spine in a series of low limestone walls, which double as seating for families. These walls draw the eye to the gentle hills beyond and curve through mixed planting towards a large gathering space. An apple archway leads to a summerhouse and there's the calming sound of water flowing into a long rill.

Everywhere the benefits of nature can be felt. Plants have been chosen for their aesthetic and multi-sensory qualities: grasses to catch the wind, herbs to smell and taste, and shrubs and trees for texture and winter structure. Mature beech hedging was donated from Cleve West's winning garden after the 2012 Chelsea Flower Show. Native hedging is planted around the perimeter fence.

There are 23 trees planted in the garden, including *Betula pendula* and *Amelanchier lamarckii*, the berries of which are attracting birds to the garden. Shaggy box balls and rosemary punctuate a looser herbaceous palette, and perennials such as *Echinacea*, *Foeniculum*, Asters and the aptly named *Aruncus* 'Horatio' bring texture, colour and scent.

### Planting

The initial planting of the garden was completed by September 2012. New plant varieties have been added over the past five years, as directed by Cleve during his visits each season, to keep the design fresh. Planting in the wooden planters is changed seasonally to provide variety and interest; this summer we are growing a range of ornamental vegetables and salads, as well as flowers for cutting.

The garden is maintained by a Head Gardener and a team of volunteers with the assistance of patients with spinal cord injuries.
